Chapter 1

Introduction & Overview

Purpose

This comprehensive plan serves as a decision-making guide for local
government officials and community leaders. Based on input from the
public and a steering committee, the plan identifies needs and
opportunities, goals and policies, land use practices, and an
implementation framework for key elements.

Process

The comprehensive plan process follows the rules of the Georgia
Department of Community Affairs (DCA), Minimum Standards and

Public Involvement

Public Input & Steering Committee

The joint Siloam/Union Point/White Plains planning process began with
a public hearing and was followed by a series of community input sessions
during which the public and a local steering committee were invited to
discuss local trends and aspirations. The availability of steering committee
members to take questions and comments throughout the process (as
presented at the first public hearing) provided additional feedback
opportunities. A final public hearing was held before submittal of the plan
to the DCA for review.

NEGRC’s Role

The Northeast Georgia Regional
Commission’s (NEGRC) Planning &
Government Services Division
oversaw the development of this
plan, including facilitating public and
steering committee meetings.
Chapter 2

Needs & Opportunities

The following list of needs and opportunities results from a Strengths, Weaknesses, Opportunities, and Threats (SWOT) analysis conducted at the first input meeting, with both steering committee and public in attendance, as well as professional analysis of relevant data.

*Italicized entries indicate high priorities (with STWP project number in parentheses)*

Population, Community, and Governance

Siloam’s population of 261 is projected to remain stable through 2022, after declining by approximately 20 individuals since 2010 (ESRI BAO). Meanwhile, Greene County is projected to grow by 1.25% by 2022. **Siloam** does not wish to pursue growth for growth’s sake, although the opportunity exists to determine whether there are underlying reasons for the lack of growth.

As of 2017, the median age of Siloam is 47, far higher than Georgia’s average of 37 (ESRI BAO). Given that 33% of Siloam’s population is already over 55, the need for senior services will soon grow. **Siloam should plan for senior service delivery before the need becomes acute.**

Siloam’s median income and educational attainment levels trail the state average, signifying a shortage of financial resources in the community and limited potential for improvement without intervention. However, Siloam’s majority-minority community has a history of cooperation. Therefore, creative, small-scale solutions should be the first priority. Improvement projects organized as community-wide events could strengthen community pride, improve Siloam’s image, and stoke the interest of residents and youth in Siloam.

Planning, Land Use, and Housing

Siloam features low-density, primarily residential development (either detached single-family or mobile homes) and home ownership rates hover at 70% (ESRI BAO). Some of this housing may be at risk of blight. Therefore, **Siloam should inventory the housing stock to identify both blight and resources to fix these properties.**

Siloam’s low-density development pattern can easily accommodate new infill, especially along State Route 15 and State Route 77. The cluster of abandoned historic buildings at the intersection of these roads could be restored and developed to create a walkable downtown core populated by small-scale local businesses.

The community identified a parking shortage as a weakness. However, significant informal parking is available (unstriped paved lots, unused on-street parking, and grass lots), particularly at the downtown intersection. **Striping these areas and connecting them with destinations via sidewalks should solve the parking problem without paving new lots.**

Focusing on improving pedestrian connections (particularly at the intersection of SR 77 and SR 15) should open the door for the creation of a vibrant downtown core which will not be possible if too much parking is built.
Transportation

The vast majority of Siloam’s residents drive to work, with 40% commuting outside of Greene County (ESRI BAO). The area’s largest employment centers are in Greensboro and near Lake Oconee. Siloam is located at an I-20 exit, which could attract growth or pose the threat of sprawling, auto-centric development to the town. Siloam has the opportunity to expand pedestrian facilities, increase connections with Greene County’s rural transit service, and grow local businesses to provide transportation and employment options that reduce the need to commute long distances by car.

Natural & Cultural Resources

Stakeholders wish to protect several historical structures in town. In particular, several abandoned commercial buildings that sit at the intersection of SR 15 and SR 77 could make prime sites for businesses if they were restored. Since Siloam lacks financial resources, an incremental approach that first identifies the modest improvements made within existing capabilities, and builds from that base, is the likeliest to succeed.

Community Facilities & Services

Siloam lacks municipal sewerage service, but the low-density development pattern, small population, and lack of growth would likely make maintaining a conventional sewer system cost-prohibitive (even if grants paid for construction). However, cheaper alternatives like STEP systems, gravity pumps, and small diameter gravity sewers could be explored.

Siloam also lacks natural gas service. If the town wishes to add municipal gas service, then a similar approach to adding sewer should be taken, in which careful consideration of alternatives and lifecycle costs should be considered.

Meeting attendees noted the need to improve the town’s recreation facilities for residents (especially children). A basic recreation audit and planning exercise should be conducted.

Intergovernmental Coordination

Installing sidewalks and improving the intersection of SR 77 and SR 15 will likely require cooperation between Siloam, GDOT, and Greene County.

In preparation for SPLOST and T-SPLOST referenda in the near future, Siloam should identify qualifying projects for potential inclusion.

Economic Development

Siloam’s best bet for economic development is to bring the community together to create small-scale improvements and opportunities to start small businesses. Identifying and mobilizing key stakeholders will be essential to creating and realizing the vision for Siloam. By improving the city for current residents, Siloam will be more likely to retain and attract residents and travelers.

Siloam also features a Vulcan Materials mine, a valuable local employer and driver of traffic to the area. Local leaders should work with mine supervisors to mitigate any operational effects on the community and maximize employment opportunities for local residents.
Chapter 3

Vision

Siloam will be an attractive and welcoming community, leveraging participation from residents and local institutions to restore and create small, human-scaled businesses connected to safe, walkable neighborhoods.

Goals & Policies

1. Reestablish and reinvigorate the downtown core by improving walkability and fostering small business development
2. Create complete streets and trails networks
3. Improve recreation destinations
4. Explore feasibility of adding sewer and gas lines
5. Create a livable city in which residents can age in place
6. Coordinate service delivery and capital improvements with state and local partners
Chapter 4

Land Use

These future land uses (FLU) correspond to the map that follows. While zoning regulations vary, FLU represents a standardized approach to envisioning and planning for desired scenarios. As such, inconsistencies between FLU and existing land use or zoning maps may arise because FLU presents a blueprint for what is to come.

Agriculture

Predominantly farms. Residential development should maintain a rural character with single-family homes on large lots.

Commercial

Property where business and trade are conducted. Includes retail stores, shopping centers, and office buildings.

Industrial

Property used for warehousing, distribution, trucking, and manufacturing.

Public/Institutional

Used for local community facilities, general government, and institutional purposes. Examples include schools, government buildings, health facilities, places of worship, and libraries.

Single-Family Residential

Conventional residential subdivisions, as well as conservation subdivisions, with supportive recreational amenities and small-scale public/institutional uses.

Transportation/Communication/Utilities

Areas used for transportation-, communication-, or utility-related activities, such as power generation plants, sewage and water treatment facilities, landfills, railroad facilities, telecom towers, public transit, telephone switching stations, airports, or similar uses.
Future Land Use Map
Chapter 5

Community Work Program

The Short-Term Work Program (2018-2022), updated every five years, provides a list of specific activities that the community plans to address as immediate priorities. A Report of Plan Accomplishments, which provides status commentary on the previous work plan (2013-2017), follows.
